**GeoPackage • IoT • IndoorML • POI
3D Portrayal • Sensor Web • ARML2**

The Open Geospatial Consortium (OGC) invites you to an interactive afternoon where you will learn:

- ⇒ How OGC Standards are solving key challenges for the LBS industry?
- ⇒ How are companies already taking advantage of OGC standards?
- ⇒ What are the OGC standards I can use and under what conditions?

This information and networking event will feature:

- ⇒ Introduction to the OGC processes, members and results
- ⇒ Case studies of Next Generation LBS
- ⇒ Six OGC Standards Showcase Stations
- ⇒ Demonstrations of OGC standards on mobile

OGC standards make information access rapid, incremental and communicate position quickly, and inexpensively including when roaming.

We look forward to sharing the knowledge of the world's leading experts in the use of open standards to make location count
